## GAME DESIGN

### Christmas Bauble Wheel and Helping Dwarves

Jingle Spin™ features a Christmas bauble wheel loaded with different feature baubles: a Spreading Wild Bauble, a Free Spins Bauble, a Coin Win Bauble and a Surprise Bauble. The feature contained in the bauble held by helping dwarves above the reels is activated when a Wild symbol appears randomly on the reel below.

### Spreading Wild Bauble

Spreading Wild baubles turn all adjacent and diagonal symbols into additional Wild symbols. These additional Wild symbols do not activate any feature baubles held by helping dwarves.

### Free Spins Bauble

Free Spins Baubles activate the number of Free Spins displayed on the bauble.

### Coin Win Bauble

Coin win Baubles add coin wins to the total bet line win.

### Surprise Bauble

Surprise Baubles contain a random feature bauble.

### Free Spins

At the start of Free Spins, the Christmas bauble wheel will deliver 4 baubles into the hands of helping dwarves, and a fifth one when reels stop spinning. During the next spin and each subsequent spin a new bauble will be placed in the hands of the rightmost helping dwarf, so baubles are always being passed.

## ADDITIONAL INFORMATION

### Randomisation

#### Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

### Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

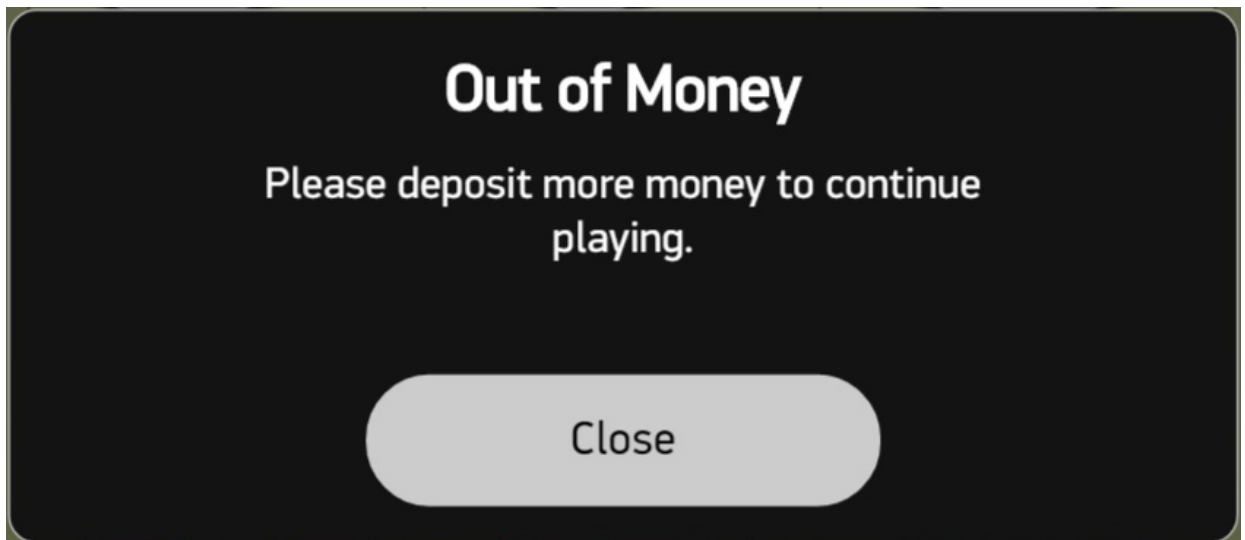

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

(Italy jurisdiction only) Further information on management of malfunctions is also described in section 3.2.1 of the Gaming Platform (Progetto Della Piattaforma Di Gioco) document. This document provides details on how a player is informed of balance return payments and the technical process.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

### Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
