GAME DESIGN

Basic Mode Winning

Supermeter Mode Winning

Mystery Win

Basic Mode

The default bet to play in basic mode is 10. If there is a winning, players can decide either to collect the winnings or play with the basic mode winnings in the Supermeter mode. In basic mode, wins are paid according to the paytable that is displayed to the right of the bottom reels.

Supermeter Mode

Mega Joker features a Supermeter mode that is played in the top reels. Players are automatically transferred to the Supermeter mode when they win in the basic mode. The winnings in basic mode are added to the Supermeter credit that is displayed in the middle of slot.

- **Supermeter mode play:** Players can bet with 20, 40, 100, or 200 coins in the Supermeter mode at pre-selected coin value. Players can collect Supermeter credits and transfer it to the basic mode at any stage.
- **Supermeter mode payout:** Depending on the current bet, Supermeter wins are paid according to the highlighted paytable. The maximum win in Supermeter mode is 2000 coins.

Mystery Wins

Mega Joker awards mystery wins at various bets. The mystery win amount depends on position of jokers on the reels and the current bet. For example, at bet 100, a joker in the middle reel gives a mystery win between 100 and 2000 coins.

Jackpot

Jackpot

The game features a progressive Jackpot, which is awarded on a randomly selected game round. The current amount of the Jackpot is shown in the Jackpot display box.

The Jackpot value increases each time the basic game is played. Once the Jackpot is won, other active players get a pop-up message that another player has won the Jackpot.

ADDITIONAL INFORMATION

Randomisation

Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

Algorithm for a Random Reel Position

A reel represents an array of symbols where each symbol has an index ("a position").

1. A random number between 0 (zero) and the length of the reel is acquired.
2. The random number is added to the game as "the new reel position to use".

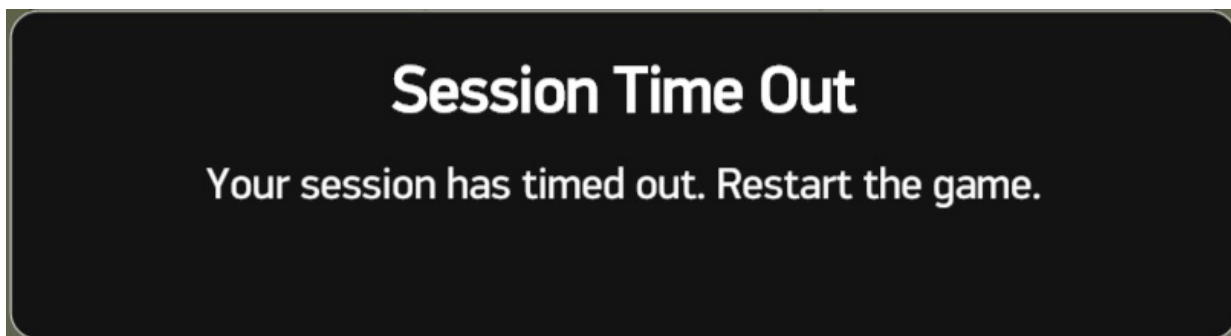

Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

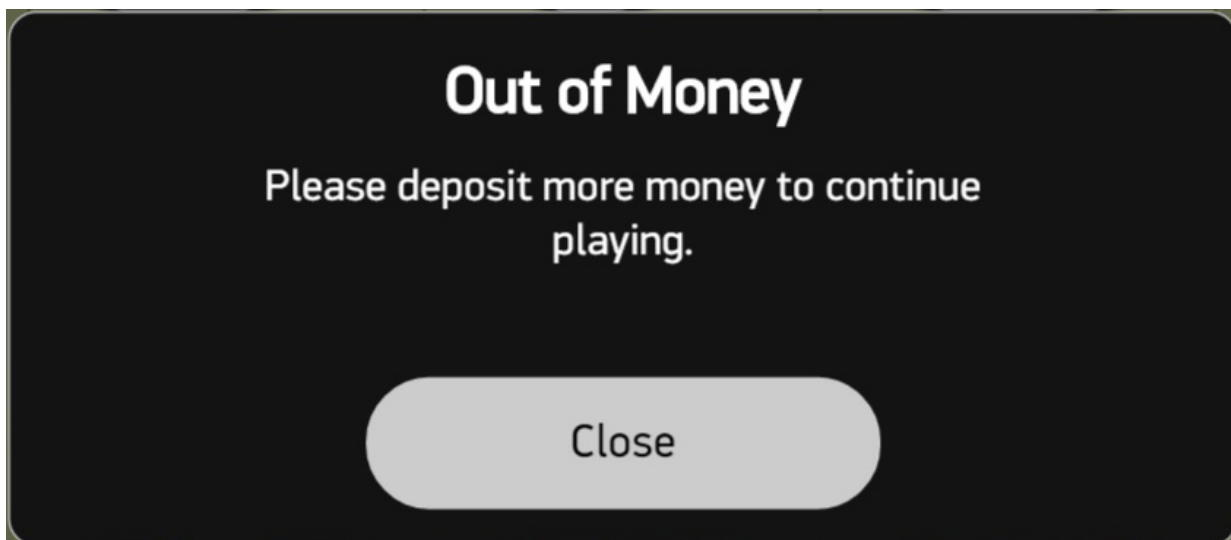

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

(Italy jurisdiction only) Further information on management of malfunctions is also described in section 3.2.1 of the Gaming Platform (Progetto Della Piattaforma Di Gioco) document. This document provides details on how a player is informed of balance return payments and the technical process.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
