Main game

### Game Theme & Graphics

The sights and sounds of the bygone arcades are brought back to life in Starburst™ – the latest gem in the NetEnt™ offering.

In this visually stunning game, brilliantly lit jewels take the central role. With their highly distinct shapes and vivid colors, players will have an easy time analysing the results of each spin. A dark background with subtle, starry particle effects serve to enhance the appeal of the game further while a rich soundtrack adds to the feeling of a vast cosmic space. Starburst™ is a truly unique environment for players of all levels.

### Main Game

- Starburst™ Wild. Wild symbols appear on reels 2, 3 and 4.
- Big Win Presentation. All high wins in the game are followed by a special Big Win presentation.
- Quick Spin. The length of game rounds can be shortened by checking this option in the Game Settings menu. G4 restrictions apply.

### Game actions.

The buttons on the keypad perform the different game actions:

	Clicking one of the numbered buttons changes the bet level (i.e. number of coins per bet line).
	Clicking this button starts a game round with the current coin value and bet level.
	Clicking this button starts a game round at the current coin value with the maximum bet level selected.
	Clicking the left and right arrows increases and decreases the coin value. To increase or decrease faster, the player can click and drag the slider below.
	Clicking AUTOPLAY automatically plays the game for the selected number of rounds.

### Starburst™ Wilds

When the Wild symbols hit, players will definitely sit up and notice. Wilds appearing on the reels are animated with a streak of vibrant colors and then expand over the reel and hold in place while the other reels re-spin.

## Feedback Feature

All winning combinations are followed by dazzling, arcade-like light effects indicating the winning line and animated texts, such as Combo and Super Combo. The Big Win presentation, on the other hand, is the real pinnacle of excitement with blasts of light, flashing text and electrifying sounds, all of which emphasize the significance of the moment.

## ADDITIONAL INFORMATION

### Randomisation

#### Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

### Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

(Italy jurisdiction only) Further information on management of malfunctions is also described in section 3.2.1 of the Gaming Platform (Progetto Della Piattaforma Di Gioco) document. This document provides details on how a player is informed of balance return payments and the technical process.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

### Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
