## GAME DESIGN

Wild Water™ graphics

Main game

### Game Theme & Graphics

Set on a sandy beach accented with palm trees and an old hippie van, players imagine beach days as they were in the '60s, when beach bums ruled the waves. The graphics of Wild Water™ create a relaxed feeling of a sunny day on the beach, while the idea of catching that perfect point break brings adrenaline into the picture.

The animations and sounds accent the theme perfectly. The background sound track, similar in style to the Beach Boys, adds an upbeat feeling to the game. In addition, a narrated voice screams out surfer style slang on every win. Animations also amplify the beach bum experience. For every win, a wave splashes over the winning symbols helping players see what symbols completed wins.

### Main Game

Players can select the coin value and bet level before starting the game round.

### Game actions

. The buttons on the key pad perform the following different game actions:

	Clicking the left and right arrows increases or decreases the bet level by 1.

## ADDITIONAL INFORMATION

### Randomisation

#### Random Number Generator (RNG)

The algorithm used for random number generation (RNG) is Fortuna, a cryptographically secure pseudorandom number generator (PRNG) devised by Bruce Schneier and Niels Ferguson. For more information, see the document Random Number Generation.

The Random Number Generator and its implementation has been tested and approved/certified for randomness according to prevailing industry standards by an accredited, independent, 3rd party test facility.

#### Algorithm for a Random Reel Position

A reel represents an array of symbols where each symbol has an index ("a position").

1. A random number between 0 (zero) and the length of the reel is acquired.
2. The random number is added to the game as "the new reel position to use".

### Malfunction Management

If a player attempts to access a game using an invalidated session, (for example, due to inactivity or system restart) an error message is displayed in the game. The player can then log on again and resume game play. The game state is always stored so the player can resume game play exactly where he or she left off.

In case of an HTTP error, network timeout or server error a "technical error" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game at a time when the game becomes available.

If a session times out, a "session timeout" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

In case of an "out of money" event, an "out of money" message will be displayed to the player and the game will stay in an "unavailable" state until the player reloads the game.

Information regarding session timeouts and malfunctions is provided to the player via the game rules. Specifically, the player is informed that "In the event of malfunction of the gaming hardware/software, all affected game bets and payouts are rendered void and all affected bets refunded."

### Information to the Player

Players receive a response required message every hour of continuous play: They cannot continue playing unless they respond to the message which provides them with details about the amount bet and won so far during game play.

Players also have access to their game session history and game rules from within the game at all times.
